

## KALABAS INTERIORS

### **Ecological Consultation**

We have different considerations when looking at the ecological environment that you will be working in. Since the building is already standing, we will be looking with you at the best methods to have a sustainable and healthy environment to work in.

Together we will be considering:

*Acoustic surroundings:* This by analyzing your flooring and walls. We work closely to customize your surroundings limiting dust collections and echoes.

*Paint finishes and other surface treatments:* Avoiding materials with damaging solvents and preservatives.

*Furniture's and soft furnishings used:* The best qualities in your budget that will be multifunctional and durable.

*Light:* Energy saving and durable light usages that will provide you with the right amount of artificial light. The layout of the light also determines its impact of your working environment.

*Heaters and Coolers:* Though in majority of cases it is a system already set in an existing building, if required we can look at alternatives for the desired space.

*Ergonomic considerations in your office space:* Determining the correct furniture's to create to appropriate working posture.
